

Pannelli P4

Modular divider panels with 40 mm thick aluminum profile frames.

The panels can be finished in plastic laminate, in wood veneer treated with a clear, matte-finish polyurethane coating, or in fabric. They can also be made with clear or acid-finish glass.

The panels are in modular sizes, surrounded by aluminum profiles with special contours designed for connecting them to the elements in wood, and for connecting the panels linearly by means of special hardware. Accessories equipped with the standard UniFor hook can be attached anywhere along the top. The profiles are finished with an epoxy powder coating.

Stabilizing wires inside the panel, fixed at the upper and lower corners, hold the panel elements together.

The glass panels with double glazing and polycarbonate frame can be combined with the wood panels.

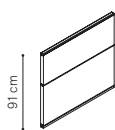

The lower elements are equipped with height-adjustable feet for leveling the panel during the assembly phase. Corner uprights in aluminum are used for corner joints between panels.

The position of the profiles makes it possible to combine other UniFor products with the panels.

The standard heights of the panels are 91, 128, and 166 cm; 37.5 cm tall modules are also available on request.
