Technical Data Sheet

Release Date
2025

The Naòs System furniture series was created by Cerri & Associati, based on the original Naòs, to interpret a new concept in office design. Winner of the Compasso d'Oro 2004, Naòs System defines an environment built with clean-lined simplicity, in which the widespread use of technology is never intrusive.

The modular elements permit flexible configurations while ensuring elevated technical performance. The system is articulated in three types of table: task tables, equipped with transparent divider panels; library tables with lamps for direct lighting of the tabletop and meeting tables.

Configured as a monolithic structure, each table is built with modular aluminium elements with triangular or rectangular sections. Four legs positioned at the corners support the horizontal frame. Intermediate legs provide additional support at the centre of the table and contain cable management raceways that lead to the power and data tray positioned below the top. The structure consists of aluminium profiles with an anodized, polished or matte finish.

The tables are fitted with hatches that fold back 180° to provide access to the cable tray. The access hatches can be fitted linearly or between each pair of modules. Divider panels and single or double monitor arms complete the configurations of the task workstations.

The work surfaces consist of acid-etched, extra-clear tempered glass, with back-painting. The line also includes a series of individual desks conceived for executive offices and for small meeting spaces.

Naòs System Library

The library table features an LED light fixture positioned along the centre line of the table.

Made with painted aluminium profiles, the fixture is supported by slender uprights that also provide cable housing. Access to power and data ports is provided by a distribution raceway between the central legs and the cable tray below the top.
