Technical Data Sheet

Release Date  
2025

Consisting of lightweight panels with a minimalist design consisting of basic elements that create a discrete and trim but incisive presence, PL partition panels are suitable for every type of space.

**LM panels**

The modular structure in micro-perforated sheet-metal is completed by a frame in extruded aluminium that accommodates hanging accessories and permits panels of different heights to be joined together.

A groove along the upper profile makes it easy to add and position hanging accessories. An inner layer of mineral wool provides for sound absorption.

The fabric panel covers are available in various types and colours.

**LL panels**

The LL panels feature a modular internal structure in wood, completed by an outer frame in extruded aluminium.

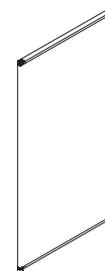

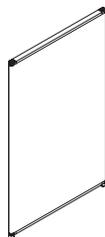

A groove along the upper profile makes it easy to add and position hanging accessories. An inner layer of mineral wool provides for sound absorption, while the fabric panel covers are available in various types and colours.

**LC panels**

In the glazed version, the two panels in tempered glass are mounted flush with the exterior side of the outer frame in extruded aluminium. The glazing is available in transparent or acid-finished glass.

All of the panels can be freely composed by means of various types of joints: two-way joints, three-way joints, four-way joints, and sliding T joints for connecting panels of different heights. All of the joint types permit the individual panel angles to be adjusted with locked positions at 15° intervals; the feet, in black PVC, are height-adjustable. The panel system also accommodates various types of raceways for cable management.

The range of accessories available for the PL panels includes an assortment of shelves in various sizes, a small overhead cabinet with a solid fall-front door, and a collection of items to personalise the workstation.
